# Jan Ace Lazo

## Network Engineer (entry-level) | BS Computer Engineering, PUP

acelazo617@gmail.com | 0976 072 1613 | github.com/donxace | Portfolio: donxace.github.io/jan-ace-portfolio

## SUMMARY

Third-year Computer Engineering student (GWA 1.48) who designs and configures enterprise networks and builds the embedded hardware that connects to them. Designed a 26-campus WAN in Cisco Packet Tracer (138 devices, 72 configurations) using eBGP, OSPF and GRE over IPsec. CCNA, JNCIA-Junos and ISC2 CC certified. Open to internship and entry-level network engineering roles.

## CERTIFICATIONS

- CCNA — Cisco Certified Network Associate
- JNCIA-Junos — Juniper Networks Certified Associate
- CC — ISC2 Certified in Cybersecurity
- Network Automation Professional Certificate — Arista Networks, LinkedIn Learning
- NetOps: DevOps for Network Engineers, Automating Networks — LinkedIn Learning
- NetOps Certified Engineer (NTO-101) — Appkademiya
- Introduction to Modern AI — Cisco Networking Academy

## TECHNICAL SKILLS

**Routing:** OSPF, BGP, static routing, EIGRP

**Switching:** VLANs, inter-VLAN routing, STP, EtherChannel

**Services & security:** ACLs, NAT/PAT, DHCP, DNS, firewalls (Cisco ASA), VPN (GRE over IPsec), port security

**Tools:** Cisco Packet Tracer, Ansible, GNS3, Wireshark

**Hardware / IoT:** ESP32, Arduino, sensors, embedded systems, PCB design and fabrication

**AI & automation:** prompt engineering, AI-assisted development, automation scripting

## PROJECTS

**PUP–Donx Campus WAN** — Cisco Packet Tracer

- Designed an enterprise WAN connecting all 26 PUP campuses through a fictional regional ISP: dual-homed eBGP edge, GRE over IPsec overlay (50 tunnels, two hubs), one OSPF area per campus, firewalled DMZ.
- Built 138 devices and 72 ready-to-paste configurations (15,205 lines), with an interactive topology map and control-plane and end-to-end verification tests.

**Vitalyze-Form — Vital Signs Kiosk** — ESP32, NestJS, React

- Team leader (5): did all hardware, firmware, backend and dashboard work. Built a kiosk system for unattended vital-signs collection: ESP32 sensor stations (RFID check-in, pulse oximeter, IR thermometer, height/weight) reporting live heartbeats to a NestJS/TypeORM backend, with a React admin dashboard.

**PNP ITMS — IT Management System** — ESP32, NestJS, React

- Team leader (3): did all backend, frontend, firmware and wiring. Multi-domain platform for a government IT department: BMI screening kiosk, intrusion detection, environment monitoring, hardware inventory and PC security assessment, each behind its own role-scoped login.

**Multi-Campus Network Automation** — Ansible

- Ansible automation for device configuration, VLAN provisioning, routing deployment and validation across campuses; cut repetitive manual work by 60%+.

**Heart Rate Monitoring System** — Arduino, PCB

- Arduino heart-rate monitor with embedded firmware, a custom-fabricated PCB and a companion mobile app for real-time visualization and local logging.

## EXPERIENCE

**Quality Assurance Intern — Hooli Software Company** — Jul 2025 – Sep 2025 (300 hours OJT)

- Ran functional, regression and responsive testing on the Microsoft Locker Platform, surfacing 30+ scenarios and edge cases.
- Designed 50+ positive and negative test cases for Passport Depot; wrote and maintained test documentation, improving test coverage 40%+.

**AI-Assisted Digital Marketing Specialist — Eminence Constructions Corp** — Jul 2024 – Jul 2026

- Built AI-assisted marketing workflows that lifted content production efficiency 70%+.

## EDUCATION

**Polytechnic University of the Philippines** — B.S. Computer Engineering (3rd year), GWA 1.48

Typing Contest Champion, 2025
